The marine laboratory has a rigorous undergraduate and graduate training program and most students in these programs supply field research with their facility mentors,” said Dr. Hench.

“Data and samples collected from near-shore and offshore waters will be integrated into courses taught at the lab, including biological oceanography, analysis of ocean ecosystems, marine mammal biology, introduction to physical oceanography and marine molecular microbiology. The lab also has a long history of engaging with research scientists from other institutions. The vessel will be advertised and made available to our colleagues through collaborating institutions and fee-for-service.”
